

FIELD NOTES

INDIAN CREEK

Mendocino County

1-11-56: Log Jam - Checked reported log jam approximately  $\frac{1}{4}$  mile below Highway 128 bridge. This jam is approximately 400 ft. long, 125 ft. wide and in some places the logs and debris are piled 12 - 14 ft. high. There is a difference of elevation of approximately 10 ft. between the upper end and lower end of jam. This jam is one of the largest I've ever seen and no doubt is a complete barrier to upstream steelhead and salmon. It would cost considerable amounts of money to remove this jam. Pictures were taken.
