

DEPARTMENT OF FISH AND GAME STREAM INVENTORY
Mendocino County - Compiled by Cherr and Griffin - 1979

STREAM NAME. Name or description of stream or stream section, i.e., Rock Creek, between Goose Lake and Dog Lake; Buck Creek; 2nd unnamed, right bank (facing upstream) tributary to Bear Creek; Delta-Mendota Canal. Use 7 1/2 minute USGS quads where available. Otherwise use 15 minute USGS quads.

LOCATION. Township, range, section, subsection of mouth or lowermost part of stream reach (stretch) being identified.

DRAINAGE AND USGS QUADS. Use most obvious descriptive location, i.e., North Yuba River (rather than Yuba River). Plus, name of USGS quad in parentheses.

FISHES. Use species abbreviations, in order of relative abundance (best guess in most cases), all species (game and non-game). If the stream files contain information on reptiles, amphibians, invertebrates, or aquatic plants, put an asterisk (*) in the SPECIES box following the last fish species listed. Record this additional information on the separate sheet titled, '-Supplemental Biological Information'. In this special case, do not take time to orally seek information, use only what is in the files. We suspect little will be found in the files, but we do not want to omit what is there.

LENGTH. In miles, measured to nearest tenth (0.1). Include intermittent streams that provide spawning or nursery areas for fish migrations from lakes or rivers. If stream forms county(s) boundary(s), duplicate information for each county. BUT! footnote appropriately for each county so data will be summed only once in statewide totals.

ELEVATION. At upper (1st) and lower (2nd) ends of stream reach (stretch) being described. Use two numbers separated by colon, i.e., 6,400:5,400 (use nearest contour line).

FLOWS. CFS, estimated or measured, at mileage midpoint of stream reach (stretch) being described. Use two numbers separated by colon, i.e., x low summer flow:x annual flow (10:500). Note here if stream is intermittent, i.e., int:200.

WIDTH:DEPTH. In feet, estimated or measured, at mileage midpoint of stream reach (stretch) being described. Use two numbers separated by colon, i.e., x width at low summer flow:x depth at same low flow (20:5).

OWNERSHIP. Major owners of stream bank, in miles, i.e., U. S. Forest Service 9, Private 5, State 5. Caution! One mile stream - 2 miles of stream bank.

PROBLEMS. Assessment of stream section and its major problems. Enter appropriate numbers in order of importance as can best be estimated. Use as many numbers as appropriate. If a problem is man-caused, put "M" in parentheses after each number unless **obviously** man-caused, i.e., riprap, logging, etc. (If a natural condition, notation is not needed.)

1. No major problems			8. Deficient food production		15. Inorganic pollution	
2. Too small to be substantial fishery			9. Deficient spawning area		16. Road construction	
3. Gradient too steep			10. Deficient shelter-cover		17. Logging	
4. Flows too low			11. Undesirable substrate		18. Mining	
5. Flows too high			12. Channelization/riprap		19. Fires	
6. High water temperature			13. Bank erosion		20. Excessive angler use	
7. Low nutrients			14. Organic pollution
